

THE TRADITIONAL FOUNDRY

Means gravity casting in sand moulds or die casting.

Means yet and again the most tangible validation of the most daring and urgent projects.

Means flexibility, value for money and a tolerance for late modification.

Means a fully controlled process due to proven know-how together with an updated quality system.

Precision casting

This is a foundry that produces aluminium sand castings using digital data or existing parts. It belongs to the traditional purveyors of:

- Aircraft
- Military
- Racing-Cars
- Development in the Automotive Industry
- Industries such as Telecom
- Laser Systems
- Braking Systems...

We offer you a selection of rough castings ranging from a few grams to over hundred Kilograms, and of relevant characteristics for: metallurgy geometry, mass, thin walls, visual aspect.

Facilities

- > Surface area 3 500 m²
- > Running winch 5T and 10T
- > 14 moulding plates
- > 4 sand blender units
- > 2 core manufacturing machines
- > 2 tilting automats
- > Ovens 4 x 100 - 1 x 350 tilting
- > Degassing unit
- > Porotec
- > Thermatest
- > 2 heat treatment ovens
- > Semiautomatic shot-peening and sandblaster
