

# ACTIVITIES & KNOW-HOW

Right from the start, PERIMECA puts its experience, its means and its reactivity at the service of its customers to meet the high and rigorous standards of organization and quality specific to the following industries:

- Aerospace
- Military
- Optronics
- Medical
- Automotive - prototypes and racing

## High-precision machining – Castings machining

The use of the Clipper 5 ERP software ensures perfect mastery of the configuration management, from the fine-tuning stage of the product right up to the mass production stage.

Our CAM software, Mastercam, enables us to control each step of the machining process whilst making full use of data files provided by customers using different softwares: CATIA V5, IGES, STEP...

Our choice of only one language common to all our machining tools gives us the flexibility and reactivity required to provide optimum customer satisfaction.

PERIMECA studies, machines and assembles mechanical products, from the primary piece to the sub-assembly pieces ready for integration.
